

How to repair leather / smart repair Intensive training

During our training you will learn all about how to repair vinyl, leather and synthetic leather. In order to guarantee a professional training the group will consist of 4 or 5 participants only. Every student will have the possibility to practise and work with different samples. The class will be customized according to your business needs. In addition you will learn how to select and handle a paint gun. During the training you can try out different air pressure guns and learn about their advantages and disadvantages.
